In options trading, credit spreads are strategies that are entered for a net credit, which means the options you sell are more expensive than the options you buy (you collect option premium when entering the position). Credit spreads can be structured with all call options (a call credit spread) or all put options (a put credit spread).. Call credit spreads are constructed by selling a call ...

### Credit Spread Options Strategies (The Ultimate Guide ...

Credit spreads are named appropriately because you actually receive credit at the initial point of transacting, usually in the form of cash into your trading account. They can play an important part in your trading strategy, depending of course on what strategies you are actually using.

### **Credit Spreads - How They Work and How To Use Them**

A credit spread is an option spread strategy in which the premiums received from the short leg(s) of the spread is greater than the premiums paid for the long leg(s), resulting in funds being credited into the option trader's account when the position is entered.. The net credit received is also the maximum profit attainable when implementing the credit spread option strategy.
