The dynamics of cellular signaling are often dominated by highly nonlinear transduction patterns seen in phenomena as diverse as neural response to stimulus (McClintock and Luchinsky, 1999), physiological response to arousal (Wilken et al., 2000, Wilson et al., 2000), in dose-response to hormonal mimics (Bigsby et al., 1999), and so on.

We employed a Bayesian framework to infer the time-calibrated phylogeny and the epidemic dynamics represented by the effective reproductive number (R_e) changing over time from the genomic sequences available from GISAID. The origin time is estimated to be December 17, 2019 (95% CI: December 5, 2019 – December 23, 2019).

The foundations of dynamics were laid at the end of the 16th century by Galileo Galilei who, by experimenting with a smooth ball rolling down an inclined plane, derived the law of motion for falling bodies; he was also the first to recognize that force is the cause of changes in the velocity of a body, a fact formulated by Isaac Newton in the 17th century in his second law of motion.

This text was originally written to accompany a series of lectures that I gave at the '35th Saas-Fee advanced course' in Switzerland and at the Institute for Astronomy of the University of Hawaii. It reviews my current understanding of the dynamics of comets and of the origin and primordial sculpting of their reservoirs. It starts discussing the structure of the Kuiper belt and the current ...
