Structure of Stars The structure of a typical star was worked out by astrophysicists after 1920, largely based on observations of the Sun. The photosphere is the visible surface of a star and is the layer to which the surface temperature and radius apply. Constantly changing features appear there.

### Structure of Stars | Scholastic

A star is an astronomical object consisting of a luminous spheroid of plasma held together by its own gravity. The nearest star to Earth is the Sun. Many other stars are visible to the naked eye from Earth during the night, appearing as a multitude of fixed luminous points in the sky due to their immense distance from Earth.
